2145

DATE MAILED: 12/10/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/882,739

Applicant(s)

CRAMER ET AL.

Examiner

Thomas Duong

Art Unit

2145

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 June 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-4 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-4 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 06 September 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 1.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Objections

1. Claims 1 and 3 are objected to because of the following informalities:

- *reversably* is misspelled

Please make the appropriate correction.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Hunt et al. (US006539422B1).

4. With regard to claims 1-2, Hunt reference discloses,

- *translating the output of said digital control units into a plurality of discrete data streams having a common communication protocol;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)

Hunt teaches of a communication environment that allows the ADC device platforms (i.e. production units), which may operate under different protocols from each others as well as the remote computing system, to communicate with the remote computing system (i.e. remote network) by translating and encoding the communication protocols of the ADC device platforms to the standardized SNMP protocol used by the remote computing system.

- *reversably encoding said plurality of discrete data streams into a first single data stream using said common communication protocol;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)

The encoding step is implied because without encoding into the SNMP format after translation, the data would not be able to transmit.

- *transmitting said first single data stream to a remote network;* (Hunt, col.2, lines 44-46; col.3, lines 57-60; col.6)

Hunt teaches of a transmission step from ADC device platforms (i.e. production units) to the remote computing system after translating and encoding the data from the plurality of protocols used by the devices into a common protocol.

- *decoding said first single data stream into said discrete data streams;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)

The decoding step is implied because, at the receiving end, which is the remote computing system, the received stream of data would be decoded into separate units, each from a particular ADC device platform, to be analyzed by the remote computing system.

- *identifying by analysis of said data at the remote network at least one target production device of said plurality of production devices to receive instructions;*

Art Unit: 2145

(Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.15, line 10 – col.16, line 13)

Hunt teaches of diagnosing and analyzing the configurations and statistics of the device platforms by communicating with the selected device platform.

- *formulating a plurality of instructions responsive to said analysis and arranged as a discrete instruction set corresponding to each of said at least one target production device;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.15, line 10 – col.16, line 13)

Hunt teaches of diagnosing and analyzing the configurations and statistics of the device platforms by communicating with the selected device platform.

- *reversably encoding said instruction sets into a second single data stream using said common communication protocol;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)
- *transmitting said second single data stream to said industrial environment;* (Hunt, col.2, lines 44-46; col.3, lines 57-60; col.6)
- *decoding said second single data stream at the local network into said discrete instruction set;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)
- *translating said instruction set into at least one of said diverse communication protocols executable by the digital control unit connected to each of said at least one target production unit; and* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)
- *delivering said instructions over the local network to the target production unit.* (Hunt, col.2, lines 44-46; col.3, lines 57-60; col.6)

5. With regard to claim 3-4, Hunt reference discloses,

- *translating the output of said digital control units into a plurality of discrete data streams having a common communication protocol;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)

Hunt teaches of a communication environment that allows the ADC device platforms (i.e. production units), which may operate under different protocols from each others as well as the remote computing system, to communicate with the remote computing system (i.e. remote network) by translating and encoding the communication protocols of the ADC device platforms to the standardized SNMP protocol used by the remote computing system.

- *reversably encoding said plurality of discrete data streams into a single data stream using said common communication protocol;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)

The encoding step is implied because without encoding into the SNMP format after translation, the data would not be able to transmit.

- *transmitting said data stream over an open network to a remote network in real time;* (Hunt, col.2, lines 44-46; col.3, lines 57-60; col.6)

Hunt teaches of a transmission step from ADC device platforms (i.e. production units) to the remote computing system after translating and encoding the data from the plurality of protocols used by the devices into a common protocol.

- *decoding said single data stream into said discrete data streams at said remote network.* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)

Art Unit: 2145

The decoding step is implied because, at the receiving end, which is the remote computing system, the received stream of data would be decoded into separate units, each from a particular ADC device platform, to be analyzed by the remote computing system.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hunt (US006539422B1) and in view of Westberg et al. (US005946309A).

8. With regard to claims 1 and 3-4, Hunt reference discloses,

- *translating the output of said digital control units into a plurality of discrete data streams having a common communication protocol;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)

Hunt teaches of a communication environment that allows the ADC device platforms (i.e. production units), which may operate under different protocols from each others as well as the remote computing system, to communicate with the remote computing system (i.e. remote network) by translating and encoding the communication protocols of the ADC device platforms to the standardized SNMP protocol used by the remote computing system.

Art Unit: 2145

- *transmitting said first single data stream to a remote network;* (Hunt, col.2, lines 44-46; col.3, lines 57-60; col.6)

Hunt teaches of a transmission step from ADC device platforms (i.e. production units) to the remote computing system after translating and encoding the data from the plurality of protocols used by the devices into a common protocol.

- *identifying by analysis of said data at the remote network at least one target production device of said plurality of production devices to receive instructions;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.15, line 10 – col.16, line 13)

Hunt teaches of diagnosing and analyzing the configurations and statistics of the device platforms by communicating with the selected device platform.

- *formulating a plurality of instructions responsive to said analysis and arranged as a discrete instruction set corresponding to each of said at least one target production device;* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.15, line 10 – col.16, line 13)

Hunt teaches of diagnosing and analyzing the configurations and statistics of the device platforms by communicating with the selected device platform.

- *transmitting said second single data stream to said industrial environment;* (Hunt, col.2, lines 44-46; col.3, lines 57-60; col.6)
- *translating said instruction set into at least one of said diverse communication protocols executable by the digital control unit connected to each of said at least one target production unit; and* (Hunt, col.2, lines 15-25, lines 44-46; col.3, lines 57-60; col.6, lines 27-34)

- *delivering said instructions over the local network to the target production unit.*

(Hunt, col.2, lines 44-46; col.3, lines 57-60; col.6)

Even though Hunt implies the encoding and decoding steps as the Examiner explained in the 35 U.S.C. 102(e) rejection above, the Examiner will present another reference, Westberg (US005946309A), that clearly teaches the encoding and decoding of data streams of different formats into a data stream of a single common format to maximize bandwidth utilization.

Westberg teaches,

- *reversably encoding said plurality of discrete data streams into a first single data stream using said common communication protocol;* (Westberg, col.1, lines 45-47, lines 60-64; col.2, lines 5-36)

Westberg teaches of receiving a plurality of data streams of different formats or protocol, multiplexing or encoding them into a single data stream of a common data format and transmitting the data over a common telecommunication channel.

- *decoding said first single data stream into said discrete data streams;* (Westberg, col.1, lines 45-47, lines 60-64; col.2, lines 5-36)
- *reversably encoding said instruction sets into a second single data stream using said common communication protocol;* (Westberg, col.1, lines 45-47, lines 60-64; col.2, lines 5-36)
- *decoding said second single data stream at the local network into said discrete instruction set;* (Westberg, col.1, lines 45-47, lines 60-64; col.2, lines 5-36)

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to combine the Westberg reference with the Hunt reference

Art Unit: 2145

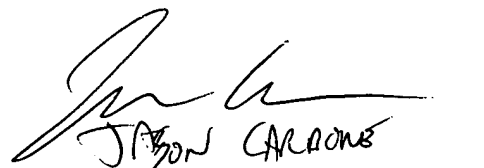

to maximize the bandwidth utilization as pointed out by Westberg. This avoids transmitting different data over separate communication channels. Both the Hunt and Westberg references teach of translating and encoding data of different formats into a single stream of data of a single common format and transmitting it over a telecommunication channel.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:
- Patki et al. (US006343321B2)
 - Carcerano et al. (US006308205B1)
10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas Duong whose telephone number is 571/272-3911. The examiner can normally be reached on M-F 7:30AM - 4:00PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A Wiley can be reached at 571/272-3923. The fax phone numbers for the organization where this application or proceeding is assigned are 703/872-9306 for regular communications and 703/872-9306 for After Final communications. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571/272-2100.

Thomas Duong (AU2145)
